PROFESSIONAL SUMMARY

Passionate and Driven Software Engineering student with a proven track record of delivering production-grade applications across the full software lifecycle. Experienced in navigating complex codebases, mentored junior developers during intense sprint cycles, and specialized in C-family languages and AI orchestration. Strong technical communicator with over 1,260 hours of professional co-op experience and a focus on building secure, scalable autonomous systems.

TECHNICAL SKILLS

- **Languages:** C, C++, C#, Python, TypeScript, JavaScript, Java, SQL (PostgreSQL, MySQL)
- **Frameworks & Engines:** .NET, Unity (3D/WebGL), React, Electron, Node.js, LangGraph, LangChain
- **Cloud & Tools:** Git, Docker, Jira, Confluence, Ollama, Google Gemini API, SQLite
- **Specializations:** Full-Stack AI Development, Operating Systems, Computer Security, Agile/Scrum

EXPERIENCE

- **VARLab** **Sep 2024 – Aug 2025**
Software Developer (Co-op) Waterloo, ON
 - Successfully rotated across 3 distinct engineering teams, diagnosing and resolving legacy bugs to facilitate major version releases.
 - Engineered and deployed production-ready Unity-based 3D Digital Learning Experiences (DLX) for complex educational simulations.
 - Mentored a new co-op developer, accelerating their onboarding through pair programming and code reviews, ensuring team velocity remained stable.
 - Architected a secure WebGL result-export system, allowing users to download and analyze high-fidelity simulation data.
 - Exhibited high-velocity delivery by completing 300+ story points within 10-week sprint cycles with 100% functional coverage.
- **Rohingya Centre** **Dec 2019 – Sep 2024**
Technical Support Specialist (Volunteer) Kitchener, ON
 - Ensured 100% uptime for community events by pre-emptively troubleshooting and configuring audio-visual hardware, laptops, and networking equipment.
 - Bridged the digital divide by providing multilingual technical assistance for community programs and troubleshooting software issues for non-technical users.

PROJECTS

- **VerbOS – Agentic Desktop Application (Electron, LangGraph, TypeScript)** Designed an OS-agnostic desktop suite using a Supervisor-Worker multi-agent architecture to automate system tasks via natural language. Integrated Human-in-the-Loop safety gates and persistent SQLite memory.
- **Machine Learning Regression Suite (Python, TensorFlow)** Developed predictive models utilizing TensorFlow and NumPy to process and visualize complex datasets, focusing on mathematical accuracy and data preprocessing.
- **TaskTally Productivity Suite (C#, .NET, MySQL)** Built a full-stack task-management application with user authentication and unit testing via MSTest, focusing on data persistence and clean OOP architecture.

INTERESTS & LEADERSHIP

- **Continuous Learning:** Actively exploring AI Ethics and the development of human-centric autonomous systems.
- **Mentorship:** Passionate about helping new developers in my community navigate the Kitchener-Waterloo tech ecosystem.
- **Discipline:** Competitive fitness enthusiast, applying athletic rigor and goal-setting to software development challenges.

EDUCATION
